ARE YOU RECEIVING THE SIGNAL LOSS ALARM?
If switched on, the Signal Loss Alarm notifies you if your sensor has not communicated with the app for 20 minutes and you may miss detecting low glucose or high glucose episodes.
To continue receiving low or high glucose alarms, make sure you check the following steps.

1. Ensure that your iPhone is within 20 feet of you at all times, unobstructed.

2. Do not force close the app – keep it running in the background.

3. Turn off Do Not Disturb mode or select to turn on Override Do Not Disturb in your alarm settings.

4. You must accept the App’s permission request for Critical Alerts to turn off Do Not Disturb mode. You can also enable the Critical Alerts setting directly from the app’s notification settings.

5. Keep your Bluetooth switched on.

If you are still receiving the Signal Loss Alarm, please contact Customer Service.
